

Requirements gathered

They mainly want this platform to sell the products(product marketplace) , buy fertilization, and to get the required workforce .

Workforce needed -

- 1.Coconut pluckers
- 2.Huskers
- 3.Fertilizing people
- 4.Coconut gathering people
- 5.Tracktor suppliers to load the coconut
- 6.Equipment supplier supplies spray bottles for fertilization
- 7.People to load in the coconut and load them out

There are 2 ways of coconut plucking

1. By a pole (Kekka)
2. By Climbing

And there are different ways they charge for plucking

- 1.per tree
- 2.per day

Coconuts

There are mainly 2 types of coconuts

- 1.DC coconut - Normally they keep it for 21 days and sell it
- 2.Curry Coconut - fresh nut,curry nut coconut

Shakila Sir currently selling DC and as kilos
Some people sell them per nut as well

Ways of selling coconut

- 1.Without the husk
- 2.With the husk

Shakila sir sells coconut without the husks and he also sells husks separately.

The person who's responsible for the estate a person like a manager is the one who's entering the coconut count to the google sheet.
When the coconuts are plucked there's one person for each tree to count the coconuts per that tree.

Current payment process-
Cheques
Bank transfers

Future - ?
Trust issues for payment and everything.

Shakila sir asked for a rating system for workers so the trust issue is solved.

Buyer seller Trust issue is there.

The huskers start husking only after a price is discussed with the buyer .

Except from coconuts and coconut husks. Shakila sir also have
pepper ,
mango ,
lemon,
Orange,
Pine apple,
poultry in the estate so they want to improve the system in the future to sell those products as well . And also he suggests they can sell cabanas in the estate for tourists in the future .

The quality measurement of a coconut, how do the buyers know the quality?
By the average nut weight (around 615g)
Kernel thickness
Location of the estate(Horakale)

When the nut count of a tree increases then the nut weight decreases

Ideally in 1 acre there's 64 trees

And in between every coconut tree there is a 26 feet gap

Should support main 3 languages
